Guide: 6.
8.

Make sure you're in the main branch locally and ``git pull origin main`` any pending changes

Make a new branch per the recommended branch name below (`git checkout -b ...`)

Fill in the items in the worksheet below (save as often as necessary)

Once finished, export the worksheet

Add the output file to any location of your choice in your repository folder

Check that git sees it via ``git status``

If everything is good, continue to submit

Track the file(s) via ``git add``

Commit the changes via ``git commit`` (don't forget the commit message)

Push the changes to GitHub via ``git push`` (don't forget to refer to the proper branch)

Create a pull request from the homework related branch to main (i.e., main <- "homework branch")

Open and complete the merge of the pull request (it should turn purple)

Locally checkout main and pull the latest changes (to prepare for future work)

Take the same output file and upload it to Canvas

*This step is new since GitHub renders the PDF as an image the links aren't clickable so this method works better

*Remember, the github process of these files are encouragement for your tracking of your progress

Response:

I have previously worked in JavaScript, HTML, and CSS on a small website project that I created for an NJIT Hackathon a couple months ago. I learned how to set the websites up and how to format the website to look a little bit prettier. However, my knowledge was incredibly basic, and there were a lot of specific terminology I was unaware of. These tutorials were a lot more helpful and helped me build upon my knowledge. I think I need more practice with JavaScript and working with the HTML DOM. I think I can read the code well, but writing it without documentation will take more practice.
